## **PATENT**

732 ts Dia 3/22/02

## IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re A	pplication of: Susan M. DYMECKI et al.	)		
Application No. 08/866,279		) Group Art U	) Group Art Unit: 1632	
Filed:	May 30, 1997	) Examiner:	Anne Marie Daker	
For:	USE OF FLP RECOMBINASE IN MICE	) ) )	THE STORY	
	PRELIMINARY AME	ENDMENT		
Prior to	o examination, please amend this application	on as follows:	19 10 C	
In the	<u>claims</u> :			

(Amended) The transgenic mouse according to claim 12, wherein transcription of said another transgene is controlled by a regulatory region selected from the group consisting of regulatory regions from the genes encoding  $\beta$ -actin, phosphoglycerate kinase, HMG-CoA reductase, major histocompatibility complex class I, \( \beta 2\)-microglobulin, HSV thymidine kinase, Rous Sarcoma Virus regulatory elements, CMV intermediate early gene, and SV40 origin.

Please enter the following amended claims prior to prosecution:

(Amended) The transgenic mouse according to claim 15, wherein said genes controlling differentiation of a cell or development of an organism are selected from the group consisting of genes encoding adhesion molecules, cyclin kinase inhibitors, Wnt family members, Pax family members, Winged helix family members, Hox family members, cytokines, interleukins, growth/differentiation factors and their receptors, kinases, phosphatases, metabolic enzymes, and antigen receptors.

Kindly consider the following new claims:

(New) A transgenic mouse comprising an Flp transgene integrated into the genome of the transgenic mouse, wherein the Flp transgene is expressed from a tissue specific or a developmental stage specific promoter in at least one cell of the transgenic mouse at a level sufficient to catalyze recombination between two FLPrecognition sequences in direct repeat orientation in said cell.
